

PERMANENT BELAY VS. SAFEROLLER® CONTINUOUS BELAY

INCREASE RETURN ON
INVESTMENT, REDUCE INSTALLATION
& OPERATING COSTS
MAXIMIZE THROUGHPUT & USER
SATISFACTION

Today's aerial adventure market offers a wide variety of safety systems. Each has different characteristics that have an impact on the overall safety, operating costs and profitability of your adventure park. A superior system pays dividends. Kanopeo® GmbH compared two adventure parks using the following safety mechanisms: Permanent Belay and the Saferoller® rolling continuous belay system.

NO RISK

RISK AREA

PERMANENT SAFETY SYSTEM

Permanent belay safety systems use two carabiners. Users must clip and unclip each carabiner independently. This is known as "active securing".

In this type of application, an additional zip line trolley is required increasing equipment and installation costs. There is increased user time at each changeover, longer waiting lines on platforms and higher levels staff supervision required.

Permanent belay systems are limited to users are from 8 years and up

A longer briefing for each user results in diminished throughput

There is no hands free movement

12 OPERATORS

350 PPE'S

REGULAR CONTROL & SERVICE REQUIRED

NO RISK

ACTIVE ZONE

SAFEROLLER® CONTINUOUS BELAY SYSTEM

With the Saferoller® continuous belay system, the user is continuously secured from end-to-end on a single safety line. No other devices are required.

Safety is assured through "passive securing". This maximizes Return On Investment (ROI) by minimizing installation costs, increasing throughput and reducing staff requirements. The net result is a 30% to 50% reduction in annual operating costs.

Only 1 device required

Users from 4 years and up

Short briefing (60 seconds)

Minimal supervision required

Just slip-on and roll

Unparalleled hands-free movement

continuous end-to-end rolling

The course can be completed faster with no manipulation on platforms leading to increased throughput

6 OPERATORS

200 PPE'S

LOW MAINTENANCE

The Kanopeo® Saferoller continuous belay system yields a higher Return On Investment by reducing installation and operating costs, increasing throughput and maximizing user satisfaction. You can't miss with Swiss.
